

THE BIG-CHAIN PLAYBOOK · WITHOUT THE BIG-CHAIN BUDGET

Play like

Spend 0.001% of their budget.

McDonald's, Starbucks, and Domino's spent **millions** building the same loyalty mechanics that lock customers in: branded apps, points, streaks, push notifications, member-only offers, voice messages, win-back automations. Atlas hands every one of those mechanics to a local business for the cost of a phone bill.

SAME PLAYBOOK AS

Brand references for comparison only. Atlas Engine is not affiliated with McDonald's Corp., Starbucks Corp., or Domino's Pizza Inc.

VS. ATLAS ENGINE

Same engine. **Pocket-change price.**

CUSTOMER SIDE

One tap to everything they care about

Branded to the business, installable as a PWA, opens on the phone with a clean Home tab that shows points, featured offer, daily spin, and progress toward their next reward.

Live points balance

Updates in real-time the moment the front desk awards. No refresh.

Featured offer with voice memo

Owner records a 10-second message. Customers tap to play. +158% conversion vs. text-only.

Daily Spin slot machine

Unlocked after each visit. Surprise prize keeps them coming back daily.

Progress bars on every reward

"828 / 2,000 — 1,172 to go." The next thing to chase is always visible.

STREAKS + SPINS + SHOP

Built to make loyalty addictive

Atlas borrows the best mechanics from your favorite mobile games — Mario-style streak trails, slot-machine spins, categorized shops, saved-gift QR codes — and bends them toward sending people back to your store.

Streak trail with milestones

3 in a row · 1 week · 1 month — each milestone fires a reward (your choice of a Reward or points).

Categorized Rewards Shop

McDonald's / Starbucks style — Food, Drinks, Birthday, VIP. Live search + "Ready to redeem" pinned row.

Saved-gift QR codes

Claim a limited-time offer → gift lands in their wallet with a QR the front desk scans to fulfill.

Live expiration countdowns

"Use it before you lose it" — the single biggest driver of return visits.

REAL PHONE NOTIFICATIONS

Lock-screen pings, not just email

Atlas is a true PWA — installs to the home screen, runs full-screen, fires actual iOS / Android push notifications. Customers see "☐Your spin is ready" on their lock screen, not buried in inbox.

8 notification types, all toggleable

Streak break · gift expiring · offer drop · check-in available · reward unlocked · birthday · review request · we-miss-you

Installs to home screen

iOS Safari + Android Chrome both support it. No app store, no review, no 30% Apple cut.

In-app notification center

Slide-up sheet with every recent ping, grouped by type (streak, gift, review, offer).

Real-time updates

Points awarded at the front desk land on the customer's phone in <1 second. No refresh.

White-labeled. The lock-screen icon is the business's logo. The app name is the business's name. Atlas is invisible to the customer.

FOR STAFF

Scan → award → done in 4 seconds

The same browser surface works on a phone, a tablet, or a kitchen PC with a USB QR scanner. No special hardware required.

 **Camera + USB scanner**
Phone camera, tablet camera,
OR USB barcode scanner —
Atlas accepts all three.

 **30-second Undo**
Accidentally awarded 50 pts
when you meant 5? Tap Undo
within 30s.

 **Fuzzy name search**
Customer forgot to install the
app? Type their name; Atlas finds
them.

FOR THE MANAGER

Run the whole program from one screen

Managers get a deeper surface above the front desk: live recap, offers manager, news, membership setup, billing, and a Team tab to invite staff.

Offers Manager

One-time promos AND automated templates side-by-side. Live mobile preview as you edit.

Membership setup

3 payment modes: in-person (cash), external link (Stripe payment link), or built-in Stripe Connect.

Google review queue

Verify each review, award points, lifetime rating tracker.

Team Manager

Invite staff via copy-link. Pre-set their email + password. Roles: Manager / Front Desk.

News + announcements

Drop a post on the customer Home tab — new menu items, holiday hours, etc.

FOR THE OWNER

Real-time proof Atlas is paying for itself

Every owner dashboard answers one question: "How much did Atlas drive for my business this month?" The number is right there at the top. Always.

 **Pre-Atlas baseline comparison**
Captured at onboarding. Every "Without Atlas" number uses YOUR real past-year data, not an estimate.

 **Operations dashboard**
Total members · repeat rate · redemption rate · inactive count — at a glance.

 **Top loyal members**
Live leaderboard ranked by lifetime points + visits. Updates the moment someone scans in.

 **We-miss-you composer**
Send a win-back push to one inactive member or all of them at once. Choose bonus points + custom message.

SET-AND-FORGET MARKETING

Offers that fire on their own

Welcome gifts, birthday bonuses, anniversary surprises, holiday promos, win-backs for the inactive — all on autopilot. Each can carry the owner's own voice memo, recorded right from their phone.

Owner voice memo on every offer

"Hey Sarah, happy birthday from Joe's!" — recorded once, plays on the customer's phone forever.

Reward OR Points gift

Each offer fires either a Reward (with QR for the front desk) or a points credit. Owner picks.

12+ holiday templates

Valentine's · St. Patrick's · Easter · Mother's · Father's · 4th of July · Halloween · Thanksgiving · Christmas + custom.

Unwrap-moment popup

When an offer fires, the customer sees an animated gift-box unwrap reveal. Replayable from the rewards tab.

Why voice works. Real owners with real voices feel like a friend, not a brand. Conversion on offers with a voice memo runs 158% higher than text-only in our tests.

FOR THE AGENCY

Manage 1 business or 100 from one cockpit

Atlas is multi-tenant by design. Every business is fully isolated (their data never leaks across) but you, the operator, see them all from a single agency dashboard. Add a new sub-account in 90 seconds.

Subdomain per business

Each customer-facing app lives at their-name.atlas-engine.app. Branded, isolated, RLS-locked.

Agency MRR tracking

What every sub-account pays you. Charts, growth, churn — all in one place.

3-step new business wizard

Basics → industry template → baseline stats → branded app launches in <90 seconds.

Role-based team access

Agency admin sees everything. Each business has its own manager + front-desk team, isolated.

READY TO LAUNCH?

Your branded loyalty app, live in 48 hours.

Fill out the onboarding form, send us your logo + brand colors, and we handle the rest. You can be scanning your first customer this week.

STEP 1

Fill the onboarding form

25 minutes. Business basics, branding, point rules, rewards, membership, automated offers.

STEP 2

Email us your assets

Logo, hero photo, reward photos, voice memos. We do the rest.

STEP 3

We build + launch

Your branded subdomain goes live within 48 hours. We walk you through it on a 30-min call.

STEP 4

Scan + grow

Print the install card, start scanning, watch retention climb.
