

THE BIG-CHAIN PLAYBOOK · WITHOUT THE BIG-CHAIN BUDGET

Play like the big guys. Spend 0.001% of their budget.

McDonald's, Starbucks and Domino's spent **millions** building the exact loyalty machine that locks customers in — a branded app, points, streaks, daily games, lock-screen push, member-only offers, owner voice notes, win-back automation and a live ROI dashboard. **Atlas hands every one of those mechanics to a local business — fully white-labeled — for pocket change.**

SAME PLAYBOOK AS

Brand references for comparison only. Atlas Engine is not affiliated with McDonald's, Starbucks, or Domino's.

VS. ATLAS ENGINE

Same engine. **Pocket-change price.**

The customer's Home tab — 100%
Joe's Coffee branding

A REAL APP — WITH THEIR NAME ON IT

Their logo on the home screen.

Not a punch card. Not a "rewards tab" on someone else's app. A **full, installable app branded entirely to the business** — their colors, their logo, their name on the icon. Atlas is invisible. The customer just sees *their* coffee shop in their pocket.

Installs in one tap

Add-to-Home-Screen on iPhone & Android. No App Store, no review, no 30% Apple cut.

Fully white-labeled

Brand colors, hero photo, logo and welcome copy — set once in the builder, live instantly.

Everything live

Points, streaks, offers and rewards all update in real time as the customer earns.

WHY IT
PAYS
+67%

Returning customers spend **67% more** than new ones, and ~65% of revenue comes from existing customers. An owned app is the cheapest way to turn a one-time buyer into a regular.

EVERY VISIT COUNTS — VISIBLY

A points balance that climbs in real time.

The front desk taps "award," and the customer's balance **animates up on their phone in under a second** — with confetti. Tiers (Bronze → Gold → VIP) give them a status to chase and a reason to consolidate their spending with one business instead of three.

Live count-up + confetti

Points awarded at the counter land on their device instantly — the dopamine hit happens in front of you.

Tier status to chase

Bronze, Gold, VIP. Status is the cheapest loyalty lever there is — people spend to keep it.

Points per dollar

Set the earn rate once. Every purchase quietly compounds the reason to come back.

INDUSTRY BENCHMARK

12–18%

Loyalty-program members generate **12–18% more incremental revenue per year** than non-members. Points are the on-ramp.

Tilt loyalty card — animates up the second points are awarded

Tap "View more" on Home →
the full streak path

THE HABIT LOOP THE BIG CHAINS LIVE ON

Turn visits into a streak they protect.

A check-in streak gives customers a reason to come back **tomorrow**, not "sometime." Milestones along the path drop real rewards, so the streak is a visible ladder of free stuff — and breaking it *hurts*. That's exactly why Snapchat and Duolingo built their entire products on it.

Milestone rewards

"Day 5 = Free Latte," "Day 10 = Free Lunch." The product photo sits right on the streak path.

Streak-break push

The day a streak is about to lapse, Atlas pings them: "Don't lose your 9-day streak." Loss aversion does the rest.

"X to go" everywhere

The Home teaser and the full grid both show how close the next reward is, so the goal is always one tap away.

WHY IT WORKS Habit

Streaks manufacture **visit frequency** — the single biggest driver of food & beverage revenue. More visits per member, on autopilot.

A REASON TO OPEN THE APP EVERY SINGLE DAY

A slot machine that pays in points.

Check in, then spin for a surprise prize — bonus points, a free item, a mystery gift. It's a tiny dopamine loop that costs you almost nothing and gets the customer **opening the app daily out of habit**, where your offers and streak are waiting.

Check-in gated

The spin only unlocks after a visit/check-in — so the game pulls them toward the door, not just the screen.

You set the odds & prizes

Bonus points, a free drink, a mystery reward — the owner controls the prize pool and how often it pays.

Daily cooldown

One spin per cooldown keeps it special and gives them a reason to return tomorrow.

WHY IT WORKS

Daily

Gamified daily rewards are the same mechanic mobile games use to drive **daily active use** — applied to your shop instead of a game.

The slot-machine reveal after a check-in

Progress bars + a scannable redemption code

A CLEAR FINISH LINE FOR EVERY CUSTOMER

Rewards they can see themselves earning.

Every reward shows a live progress bar — "**460 to go**" — so customers always know the next free thing is within reach. That "almost there" feeling (the goal-gradient effect) is what makes people add one more item to close the gap. Redemption is a QR the front desk scans. Done.

Progress bar on every reward

"You're 80% to a Free Latte." People accelerate toward a goal the closer they get.

QR redemption at the desk

Customer shows a code, staff scans, reward is fulfilled and logged. No paper, no fraud.

Real product photos

The owner uploads the actual item — a reward you can see is a reward you'll chase.

WHY IT WORKS

Goal-pull

Visible "almost there" progress is a proven nudge to **increase basket size** — customers spend to close the gap to the next reward.

LOCK-SCREEN PINGS, NOT BURIED EMAIL

Reach them on the lock screen — for free.

Atlas fires real iOS & Android push notifications straight to the lock screen, and they're **smart**: each one is triggered by what the customer actually did. "Don't lose your 9-day streak." "You just unlocked a Free Latte." "We miss you — here's 50 points." No ad spend, no email list.

8 event-triggered types

Streak about to break · reward unlocked · offer drop · check-in ready · birthday · review ask · we-miss-you · gift expiring.

Fires the instant it happens

Award points at the desk and the "Reward unlocked!" push hits their phone in under a second.

Branded & in-app center

The lock-screen icon is the business's logo. Every ping is also stored in an in-app notification center.

PUSH VS.
EMAIL
~10x

Push notifications average ~20% open rates vs under 2% for email — and automated triggered messages convert ~3–4x higher than email flows. This is the cheapest revenue lever you own.

Real lock-screen pushes —
branded as the business

The unwrap moment — with the owner's real voice

SET-AND-FORGET MARKETING

Offers that fire on their own.

Welcome gifts, birthday bonuses, holiday promos and win-backs — all on autopilot. Each one can carry the **owner's own voice memo**, recorded right from their phone: "Hey Sarah, happy birthday from Joe's!" A real voice from a real owner feels like a friend, not a brand.

Owner voice memo on any offer

Recorded once, plays on the customer's phone forever. It's the personal touch a chain can never fake.

12+ holiday templates

Valentine's, St. Patrick's, Mother's/Father's Day, 4th of July, Halloween, Thanksgiving, Christmas + custom.

Unwrap-moment popup

When an offer fires, the customer gets an animated gift-box reveal — replayable from the rewards tab.

WHY IT WORKS

Personal

Personalized, automated offers consistently **out-convert generic blasts** — and a human voice turns a discount into a relationship.

CATCH CUSTOMERS BEFORE THEY'RE GONE
FOR GOOD

Reel back the ones who drifted away.

Atlas watches for members who haven't been in for 60 days and surfaces them in one list. One tap sends a "We miss you" push with bonus credits attached — to one person or the whole lapsing list at once. Recovering a customer you already have is dramatically cheaper than buying a new one.

Auto-detects the inactive

The owner sees exactly who's slipping away — no spreadsheets, no guessing.

Bonus credits that land instantly

Attach 50 points to the nudge; they're credited the moment the customer taps the push.

Send to all, in one tap

Fire the win-back to the entire inactive list at once, or hand-pick one regular worth saving.

BAIN & CO.

+25–95%

A 5% lift in retention raises profit 25–95%. Reactivating a lapsed regular costs a fraction of acquiring a stranger.

Customer gets the nudge ·
owner fires it in one tap

Review nudge + the owner's
Google funnel

TURN HAPPY REGULARS INTO 5-STAR REVIEWS

A review engine pointed at Google.

Atlas asks your **happiest, most loyal** members — the ones with streaks and points — to drop a Google review, and rewards them with points for doing it. More recent 5-star reviews mean a higher local ranking, more "near me" clicks, and more walk-ins. It even tracks the full funnel.

Asks the right people

The nudge targets engaged members, not random traffic — so the reviews skew genuinely positive.

Full funnel tracking

Asks → submitted → verified, plus your star-rating trend before vs. after Atlas turned on.

Points for verified reviews

A small points reward for a verified review makes saying "yes" effortless.

WHY IT PAYS

Rank ↑

More, fresher reviews lift your **local search ranking and click-through** — the top of the local funnel that brings in new customers for free.

NO POS INTEGRATION. NO NEW HARDWARE.

The whole register, in a browser tab.

Staff scan the customer's QR (camera or a \$15 USB scanner), tap an amount, done — points land on the phone instantly. No Square integration, no API project, nothing to install. Mistakes are a one-tap 30-second undo, and the activity log shows **real names**, not "Guest."

Scan or type a code

Phone camera or USB barcode scanner. Award by purchase amount or quick-award a reward.

Award & remove points

Managers and staff can correct mistakes — a 30-second undo and a points-removal flow built in.

Roles & team invites

Owner, manager and front-desk roles. Invite staff by link; billing & insights stay manager-only.

WHY IT'S
SMART

0 setup

Works on day one with the hardware you already own. **No POS project, no integration fees** — the #1 reason small shops never launch loyalty.

Manager / front-desk view
— runs in any browser

A members-only club tier —
billed monthly

RECURRING REVENUE, THE CHAIN-STORE WAY

A VIP membership that bills monthly.

Stand up a paid membership — like a coffee club or VIP tier — with its own perks grid. Collect it however suits the shop: **in person, a payment link, or full Stripe checkout**. It's the same recurring-revenue play the big chains run, sized for a local business.

Perks grid the owner defines

Free drink monthly, double points, members-only offers — whatever makes the membership worth it.

3 ways to collect

In-person at the desk, an external payment link, or native Stripe checkout. No Stripe account required to start.

Predictable monthly income

Members pre-commit to coming back — turning loyal regulars into a subscription line on the books.

WHY IT PAYS LTV ↑↑

A paying member is the highest-value customer a shop has — recurring revenue plus the visit frequency a paid membership locks in.

THE PAGE THAT MAKES ATLAS IMPOSSIBLE TO CANCEL

Proof, in dollars, every time they log in.

Most loyalty tools are a black box. Atlas opens with a number: **exactly what it drove this month** — repeat-visit revenue, review value and recovered win-backs — next to a stark "with vs. without Atlas" comparison. When renewal comes up, the owner isn't guessing whether it's working. They can see it.

THE RENEWAL CLOSER

Visible ROI

Owners churn out of loyalty tools because they "can't tell if it's working." Atlas answers that in dollars, on the first screen — illustrative figures shown; live numbers come from the shop's own data.

GROWTH & RETENTION ON AUTOPILOT

Customers who bring more customers.

Every member gets a referral code — they invite a friend, both get points, and a happy regular becomes a free acquisition channel. Birthdays fire an automatic bonus + a celebratory ping, so the shop shows up on the one day a customer is most likely to treat themselves.

Refer-a-friend, both rewarded

Word-of-mouth, but tracked and incentivized — referred customers tend to stick longer.

Automatic birthday bonus

Points + a "happy birthday" push fire on the day — with the owner's optional voice note.

Set once, runs forever

Both run on autopilot in the background — no campaign to remember, no list to manage.

WHY IT PAYS

Free reach

A referral is the **cheapest customer you'll ever acquire**, and a birthday is the easiest visit to win. Atlas runs both without anyone lifting a finger.

Referral code +
automatic birthday
reward

LIVE IN 48 HOURS

Everything the chains have. None of the cost.

One white-labeled app with their name on it — points, streaks, a daily game, lock-screen push, automated offers with the owner's voice, win-backs, a review engine, memberships and a live ROI dashboard. Built, branded and shipped for them.

1

Brand it

Logo, colors, rewards, offers — set in the builder.

2

Launch in 48h

Their app goes live. QR on the counter. Done.

3

Watch the ROI

Visits, reviews and revenue climb — on the dashboard.
